

CLAUDE CODE FOLDER STRUCTURE

Where everything lives on your Mac

`firstname-lastname/` your home folder · also written as `~`

`.claude/` **HIDDEN** auto-created by Claude Code

`CLAUDE.md` **GLOBAL RULES** Claude follows this in EVERY project

`settings.json` **AUTO** Claude Code settings (auto-managed)

`claudeprojects/` where all your projects live

`project-one/` one folder per project

`CLAUDE.md` **OPTIONAL** rules for this project only

`README.md` what this project is + snapshot instructions

`SNAPSHOT.md` **AUTO-UPDATED** save point to resume from

`tasks/` Claude's working files

`todo.md` **AUTO-UPDATED** step-by-step plan with checkboxes

`lessons.md` **AUTO-UPDATED** mistakes learned, rules to prevent repeating

`project-two/` same structure repeats for each project

`README.md`

`SNAPSHOT.md`

`tasks/` `todo.md` · `lessons.md`

Hidden folder

- Invisible in Finder. Press `Cmd+Shift+.` to reveal.

Global CLAUDE.md

- Your rules. Claude reads this before every session on this computer.

Auto-updated files

- Claude creates and updates these as it works.

Optional files

- Useful but not required for every project.

Before you publish: Your site is public. Use first name only — no phone numbers, addresses, school names, or personal emails.

PUBLISH TO THE INTERNET

Netlify is a free service that turns your project folder into a live website. Drag your folder, get a URL. That's it.

- 1 **Create a free account** at netlify.com (so your site stays up permanently).
- 2 Go to app.netlify.com/drop
- 3 **Drag your project folder** (the one with `index.html` inside) onto the page.
- 4 **Your site is live** instantly at a `*.netlify.app` URL.

Updating later: Log into Netlify, go to your site's Deploys tab, and drag the updated folder onto the deploy area. Your site updates instantly.
